

To whom it may concern:

My name is Brian Almond. I am an information security professional with a large health care firm. I think that allowing unadulterated access to sniff public ip networks and VOIP phone networks is an invasion of privacy.

The lines of internet service providers should be private like information relating to ones personal medical records. This isn't a necessary thing anyway since federal law already compels ISPs to help law enforcement.

Access that is uncontrolled can only be exploited by any type of malfesence. I don't think that this should be allowed.
